SLIP RESISTANT POWDER COATINGS FIXED STAY

MAKING THE SURFACES SAFE

Slip resistant powder coatings have firstly been designed to protect people safety. They also protect substrates (aluminium and steel) from corrosion and offer a nice design to your applications. Fine Texture aspect of Syntha Pulvin slip resistant powder coatings bring many benefits:

- Exterior durability
- Reduce the risk of slipping
- Ease of application - 1 layer
- VOC free

Slip resistant powder coatings are available in Qualicoat Class 1 & 2 technologies. More than 200 RAL shades available on stock. Architectural applications:

- Decking
- Flooring
- Platforms
- Walkways
- Ramps
- Steps

SLIP RESISTANCE RATING

Slip resistance is determined using the pendulum CoF test (also known as the portable skid resistance tester) according to the requirements of British Standard, BS 7976: Parts 1 - 3, 2002.2

The method is based on a swinging, imitation heel (using a standardised rubber soling sample), which sweeps over a set area of flooring in a controlled manner. The slipperiness of the flooring has a direct and measurable effect on the pendulum test value (PTV) given.

SLIP POTENTIAL	PTV*1	Rz, surface roughness*2
High slip potential	0-24	Below 10 um
Moderate slip potential	25-35	10-20 um
Low slip potential	36 +	20 um + <i>syntha pulvin</i>

*1 UKSRG guidelines (2011) classify the slip potential based on the PTV values.

*2 Surface roughness, Rz, can also be used to classify the slip potential of a flooring surface using the UKSRG guidelines detailed in table 2 for water contaminated floor surfaces.
