## valPure® NON-BPA COATINGS

At Sherwin-Williams, our coatings protect more than your products – they protect your brands too. As one of the world's largest suppliers of protective and decorative coatings for light metal packaging, we are a proud supporter of the metal can – the preferred sustainable packaging solution. We provide customers access to the industry's most comprehensive technical application and regulatory expertise, as well as an unparalleled global supply network.

Packaging coating formulations from Sherwin-Williams have delivered decades of proven safety and performance. Today, consumer safety, sustainability and global regulations are the top considerations in our formulations. Sherwin-Williams has the products and the support you need to protect your brand in these uncertain times. We are constantly developing next-generation packaging products and innovations like our Safety by Design product development protocol. This process focuses on the early screening of materials for regulatory and environmental compliance, and works to ensure market acceptance and longevity of our products.

valPure is our umbrella brand name for our innovative, non-BPA\* coating solutions, providing our customers with coatings options to address changing regulatory requirements or consumer preferences. These coatings are specifically engineered to anticipate the future while delivering the performance characteristics you already demand for your most complex packaging processes and designs. Available in three coating technology platforms – acrylic, polyester and non-BPA epoxy – this family of products serves the food, beverage and household packaging container markets and is approved for use across these industries in the US, Canada, China, Japan and the European Union. Sherwin-Williams is the only company that offers non-BPA epoxy coating technology.

valPure provides leading-edge coating solutions that protect the integrity of your products and your brands, offering a complete portfolio of coating solutions for almost every light metal packaging application. From general packaging, such as infant formula containers, baby food closures and monobloc bottles, to food and beverage can bodies and ends, there is a valPure solution for your application.

*\*Non-BPA: This designation indicates that the coating technology is based on polymeric components that are not derived from Bisphenol A.*

**valPure packaging coating technologies are developed to address consumer preferences or future regulatory requirements, while meeting customer needs.**

- A complete portfolio of non-BPA coating solutions for almost every light metal packaging application
- Supporting the metal can, the preferred, most sustainable package in the industry
- Coating solutions developed with the Safety by Design development protocol

As the leading global supplier of packaging coatings, Sherwin-Williams helps develop, protect and advance the packaging design and heritage of many of the world's best-known brands. Whether your goal is to develop a new generation of packaging designs, meet ever-changing regulatory challenges or to enhance the sustainability of a packaging product, you can count on Sherwin-Williams to deliver the solutions you need.
