FASTOP™ MULTI DP

POLYURETHANE CEMENT SCREED FOR AGGREGATE SCATTER

REFERENCE: EPD10763
ENVIRONMENTAL PRODUCT
DECLARATION GUIDE (EPD)

Independently verified by NSF in accordance with ISO 21930 and ISO 14025 Life cycle assessment independently verified in accordance with ISO 14044

DOCUMENT OBJECTIVE:

Provide an overview of the critical data that can be used to calculate the Global Warming Potential (GWP) in kilograms per carbon equivalent (kg CO₂e) for this product.

METHODOLOGY FOR CARBON EQUIVALENT CALCULATIONS:

The document utilises an externally validated methodology that has been developed for all site-applied decorative coatings which has been applied to high performance industrial coatings. The assessment was completed using high-quality datasets including primary source, industry data, and commercial data in the GaBi LCA tool. Although not a perfect fit, it provides comparative data through an established independently verified framework widely in use by the coatings industry.

Key clarifications include:

- Based on Product Stage to End-of-Life of Product (Cradle to Grave)
- Under Product Category Rules (PCR) selected for Architectural Coatings
- Functional Unit: 1 m² of protected substrate for 60 years (assumed lifetime of the building)
- PCR based on market life of 10 years includes multiple re-applications throughout the life of the building

WHAT IS CARBON EQUIVALENT?

A **carbon dioxide equivalent** or **CO₂ equivalent**, abbreviated as **CO₂e** is a metric measure used to compare the emissions from various greenhouse gases on the basis of their global-warming potential (GWP), by converting amounts of other gases to the equivalent amount of carbon dioxide with the same global warming potential.*

HOW TO CALCULATE THE CARBON EQUIVALENT VALUE FROM THIS EPD DOCUMENT TO USE ON A PROJECT?

	FASTOP MULTI DP	Mixed
A	Total Quantity Needed using Market-Based Life (kg/m²) TABLE 4	30
В	GWP Inc. Bio Carb (kg CO ₂ e) stated on EPD TABLE 9	62.73
С	GWP Inc. Bio Carb (kg CO2e) per 1kg	2.09
